

Transmit | Capture | Process

For over 25 years Active Silicon has been delivering leading edge digital imaging products and solutions.

We design and manufacture custom embedded systems for image processing and machine control, as well as camera electronics for image data transmission and frame grabbers for data acquisition.

With applications in many areas of science and industry, including manufacturing, life sciences, medical imaging, transportation and security, we will continue to provide imaging components and embedded systems that help our customers provide world-class solutions – today and long into the future.
