Accepted by *even* more platforms and operating systems than any other frame grabber.

ACTIVE SILICON 09/03
LFG4-PCI / PMC / PC/104-Plus

Active Silicon LFG cards have again extended the boundaries for standard video acquisition, with new variants:

- Standard PC format

- PC/104-Plus for embedded systems

- PMC for high-end embedded systems

- CompactPCI for industrial embedded systems (3U and 6U)

- LFG4 with 4 independent video channels & 16 inputs on a single 64-bit PC format card

- LFG-Lite for low-cost high-volume applications

A comprehensive Software Developers Kit is provided with software libraries that include royalty-free JPEG and wavelet image compression, plus drivers for Windows 98/NT/2000/XP, DOS, Linux, VxWorks, QNX, Mac OS X as well as other specialist operating systems…using a common API.

Whatever your acquisition needs, one of these flexible cards should do nicely!
