

FireBird CoaXPress Frame Grabber. At 25Gbps, fast doesn't begin to describe it.

“ The specific benefit for us with CoaXPress is the ability to run long cables outside the treatment environment as we have seen PC failures in such a harsh environment. Our latest specification camera can only operate at 3m over Camera Link, but we have had no problems at 45m with CXP. ”

Medical OEM and adopter of CoaXPress

Designed for ultimate performance, the FireBird CXP-6 provides blisteringly quick image acquisition with no CPU intervention using the latest FPGA technology, DDR3 memory and a fast 8-lane Gen2 PCI Express interface.

Utilizing the new digital transmission standard CoaXPress, each link supports up to 6.25Gbps data rates, along with power up to 13W and control at 20Mbps – all on a single coax cable of lengths up to 40m or over 100m at 3.125Gbps.
