

12-13 October: Meet us at Embedded VISION Europe, Stuttgart

Organised by the European Machine Vision Association (EMVA) and Messe Stuttgart, **Embedded VISION Europe** is a new conference focusing solely on embedded systems in a variety of industries. For us the event is an important opportunity to showcase our embedded technology and share ideas about new application opportunities in various sectors through first-hand discussions with the industry leading delegates attending. Active Silicon will be exhibiting our latest **embedded systems**, come and meet us on stand 26.

The latest innovations in Embedded Vision

Table-Top Exhibition | Technology Showcase

Among our other **products**, we will be proudly showcasing our **USB3 Vision Processing Unit**. We will demonstrate live simultaneous acquisition, processing and display from four USB3 Vision cameras. The unit processes the image stream in real-time and provides several data output options, including 3G-SDI.

The **USB3 Vision Processing Unit** has been developed for industrial and medical use. It is currently in production for use by one of our customers leading the way in computer vision assisted surgery. Internally the VPU consists of our **COM Express carrier card** fitted with a high performance Intel i7 or similar processors.

A PCIe/104 expansion slot allows for flexibility in system design. With all the standard PC interfaces available, this embedded system can be readily adapted for many embedded vision applications. Come and visit us in the exhibition area to see and discuss what our experts can do for your business.

Programme

Talks

The **conference programme** opens with a focus on leading-edge technology with Raj Talluri from Qualcomm Technologies looking at the impact of IoT applications on computer vision. Other speakers include Marco Jacobs from Videantis, Giles Peckham from Xilinx, and Intel's David Moloney. Machine learning, spectral sensing and miniaturization will all feature heavily in the presentations, offering delegates the opportunity to hear all about the latest developments driving the machine vision industry.

One-to-one Meetings

Networking is a highly valued aspect of the event, and attendees have been able to pre-arrange one-to-one meetings with fellow delegates. Alongside networking breaks, we will have the chance to meet other industry leaders in this technology sector and, of course, our customers, in an informal yet productive environment. Want to know more about our **embedded systems, acquisition cards and imaging solutions**? Come along and speak to us in Stuttgart, or **contact us** via our website.

Active Silicon is a leading manufacturer of imaging products, embedded systems and custom solutions. If you would like to stay informed of upcoming events, products and news in general, then please follow us on one of our social media channels below.
