

QUALITY POLICY

Active Silicon will build on its reputation and commercial success by designing and manufacturing the very best digital imaging products using leading edge technologies and innovative design skills.

Our future success will be achieved by listening to customers, understanding their needs and expectations, and meeting their requirements through our commitment to proven design methodologies, effective quality procedures and attention to detail.

We will involve our people in the organisation's development, use their knowledge and experience, recognise their contribution, and provide an environment in which they are motivated to reach their full potential. We encourage everyone to look for improvements in the efficiency and effectiveness of our products, processes and our Business Management System.

The management team recognise the responsibility we have to employees, customers, suppliers, other interested parties, and to the environment. We have policies to ensure we adopt best business practices in all areas, and in the areas of Quality, Health and Safety, and Environment these policies ensure we comply with the appropriate legislation. Our commitment to Quality is demonstrated through maintaining our Quality Management system to ISO 9001:2015 and having the system externally audited by a UKAS accredited body.

All these elements are essential factors in building long term business success through consistent growth in revenue and profitability.
