**Langley, UK, September 2026**  
**FOR IMMEDIATE RELEASE**

### Active Silicon Expands Harrier Range with Two New Global Shutter Cameras

Active Silicon has expanded its Harrier autofocus-zoom camera range with new [10x and 30x global shutter models](#), providing flexible and compact imaging solutions for capturing fast-moving subjects without the distortion associated with rolling shutter sensors.

Both cameras combine a 3MP Sony Pregius S global shutter CMOS sensor with real-time Full HD video output at up to 1080p60. These cameras support precise image acquisition in applications including UAVs, ROVs, industrial inspection, robotics, transport, and remote monitoring.

The Harrier 10x and 30x AF-Zoom Cameras give system designers a choice of optical-zoom range to suit their imaging requirements. Both feature day & night operation, digital image stabilization, noise reduction, and other benefits, allowing engineers to select the field of view and level of magnification best matched to their application.

The native video output format of the cameras is LVDS and CVBS, but the product range has been extended to include cameras with USB 3, HDMI, and Ethernet IP video output. This is achieved by tightly integrating a Harrier Camera Interface Board to make a pre-assembled and tested camera product with the desired video output. The range of available video formats and camera control interfaces enables straightforward integration into new and existing vision systems.

The Active Silicon [Harrier 10x and 30x AF-Zoom Cameras with Global Shutter](#) are available now.

### About Active Silicon

Active Silicon, a Solid State plc group company, designs, manufactures and supplies imaging and embedded vision systems that enable the capture, processing, and transmission of image data in high performance and critical environments. World-class products include innovative embedded systems for IoT and related applications, pioneering autofocus-zoom cameras and high-speed image acquisition cards that support continuous real-time, high-resolution image capture. Established in 1988, Active Silicon has a longstanding, global customer base and Active Silicon's products have applications in many areas of industry, science, and technology - including advanced manufacturing, life sciences, robotics, medical imaging, security and defense.
